DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of Staffiere (US patent 6,137,192).

As per claims 1 and 6, AAPA teaches all the limitations except a FET coupled to the second source and an inverter for preventing a current flow from the second source when the first power is available. However, Staffiere teaches a power circuit arrangement, wherein a FET is coupled to a second source and an inverter is provided for preventing a current flow from the second source when a first power is available (Figures 15, 16).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify AAPA's circuit arrangement with Staffiere's FET/inverter

arrangement for the purpose of completely isolating the secondary source in presence of the first source.

As per claims 2-5 and 7-10, Staffiere teaches using either a N-type or a P-type FET but does not specifically disclose the claimed variations. However, the Examiner takes official notice that the claimed variations are well-known switching equivalents in semiconductor switching the art. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify AAPA's circuit arrangement with depletion mode or enhancement mode FETs since they are well-known switching equivalents in semiconductor switching the art.

4. Art of general nature relating to power switching has been cited for applicant's review.
